

soundSation GO-SOUND

GO-SOUND Series ALL YOU NEED IS... SOUND

» Who said that a portable plastic speaker necessarily imply low quality performance? We at **SOUNDSATION** are constantly striving to offer everything you need in a small PA application, trying to keep the best value for money with honesty and awareness on physical limits of plastic enclosures. GO-SOUND is your companion when play "on the road" and don't have time for a sound-check; when you forgot cables but in two minutes have to play for your audience; when you didn't expect you wouldn't be alone, but you'd have two friends in a jam session. This is GO-SOUND: the speaker good for every season!

» Six two-way polypropylene active speakers with woofers from 8" to 15". The 12" and 15" models are available in MULTIMEDIA version too, with Bluetooth™, USB and SD-card multi player. All speakers embed high-quality Class-AB amplifiers from 200W to 880W, selected transducers to match any kind of portable PA application, sturdy, lightweight and smart polypropylene enclosures with metal grille and acoustic foam to protect woofers and give a pleasant look.
